# R212

Cinema extra-flat low frequency reinforcement speaker

## R212

Extra flat, designed for rooms of 70 to 1.000 people (with 3 modules), it can fit behind all the the screens, even if they are almost sticked to the back wall. The use of two 12" (31cm) speakers, instead of a 15" (38cm) has allowed its depth to be reduced to 17cm. Despite this, there is no compromise whith its sound quality. This speaker can also be used to ensure bass reinforcement for lateral (walls) surround channels with an exclusive hanging system including silentblocks. The R212 delivers a full, warm and deep sound in rooms lacking space normally required behind the screen. The 12" speakers with a 4" moving coil are exclusive models designed by DK Audio.
